

ATS Resume Analysis Report

ATS Score: 40.00%

Matched Skills

- Python
- Scikit-learn
- Pandas
- NumPy
- Matplotlib
- Statistics

Missing Skills

- AWS
- Azure
- TensorFlow
- PyTorch
- NLP
- Generative AI
- Data Visualization
- Communication
- Teamwork

AI Review

****1. Strengths:****

The candidate possesses a strong foundation in core data science libraries (Python, Scikit-learn, Pandas, NumPy, Matplotlib) and essential analytical skills (Statistics). These matched skills represent a solid base for data analysis and traditional machine learning tasks.

****2. Weaknesses:****

Significant gaps exist in advanced machine learning (TensorFlow, PyTorch, NLP, Generative AI) and crucial cloud platform experience (AWS, Azure). The resume also lacks explicit mention of critical soft skills like Communication and Teamwork, which are often essential for collaborative roles.

****3. Improvement Suggestions:****

* ****Deep Learning & Cloud:**** Focus on acquiring practical experience with deep learning frameworks (TensorFlow, PyTorch) and major cloud platforms (AWS, Azure) through projects or certifications.

* ****Modern AI:**** Explore and gain knowledge in emerging AI fields like NLP and Generative AI.

* ****Soft Skills:**** Explicitly incorporate evidence of Communication and Teamwork skills into the

resume and cover letter, perhaps through project descriptions or past role achievements.

* **Data Visualization:** While Matplotlib is present, consider broadening data visualization skills to include tools like Tableau, Power BI, or more advanced libraries if the role implies extensive dashboarding or interactive visualizations.
